Art Unit: 3632

This is the third office action for application number 10/715,754, Hands-Free Stylist Stand, filed on November 18, 2003.

Election/Restrictions

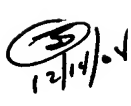

Claims 4-7 and 12-15 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter that the applicant regards as his invention.

 Claim ~~10~~^{10 & 11} is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
AME

Regarding claim 10, the applicant recites that the upper portion of the cradle is U-shaped. However, claim 1 already specified the upper portion to be U-shaped in line 5. Hence, this is double inclusion.

Claim Rejections - 35 USC § 102

Claims 1-3, 10 and 11 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent number Des. 222,964 to Woodbury in view of U.S. Patent number 6,409,131 to Bentley et al.

Art Unit: 3632

Woodbury '964 discloses an assembly (above) comprising a cradle (above) having a lower portion (above) and an upper portion (above), the upper portion having a longitudinal axis lying in a first plane (above), the lower portion having an upper ring and a lower ring wherein the upper ring is larger than the lower ring, wherein the upper and lower rings have a central axis which lies in a second plane which is generally perpendicular to the first plane; a mounting means (above), and a connecting assembly (above) between the mounting means and the cradle that permits movement of the cradle in at least one plane; wherein the upper portion of the cradle is u-shaped, wherein the cradle is formed of rod members, wherein a first one of the rod members is secured to the upper ring (above). However, Woodbury '964 fails to specifically teach the connecting assembly to permit movement of the cradle in at least two/three mutually perpendicular planes. Nevertheless, Bentley et al. '131 teaches an assembly (figure 2) including a cradle (56), a mounting means (16) and a connecting assembly comprising a gooseneck (52,54) that allows movement of the cradle in at least two/three mutually perpendicular planes. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have replaced the connecting assembly of Woodbury '964 with that of Bentley et al. '131 so as to increase the utility of the assembly by providing for a more adjustable assembly.

Response to Arguments

Applicant's arguments filed August 9, 2004 have been fully considered but they are not persuasive.

The applicant contends that the two portions of the holder of Woodbury could not lie in generally perpendicular planes. This is not true. As shown above, the longitudinal axes of the two portions do in fact respectively lie in generally perpendicular planes.

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
